

## **CAM CLUTCHES MZEU-K SERIES**

**TSUBAKI EMERSON**

## - the evolution of Cam Clutches -

Tsubaki MZEU-K Cam Clutches are sprag type one-way clutches and leader in its class. The one-way clutch was originally developed as a ratchet clutch later to become a roller ramp clutch and finally became Tsubaki's Cam Clutch. The Tsubaki Cam Clutch ensures a longer life to the mechanism than any other type of one-way clutch. Tsubaki has a vast amount of

experience producing this style of clutches and supplies them to many kinds of industry throughout the world.

MZEU- K series Cam Clutches are the most recent development of one-way clutches, based on historically proven European style clutches.

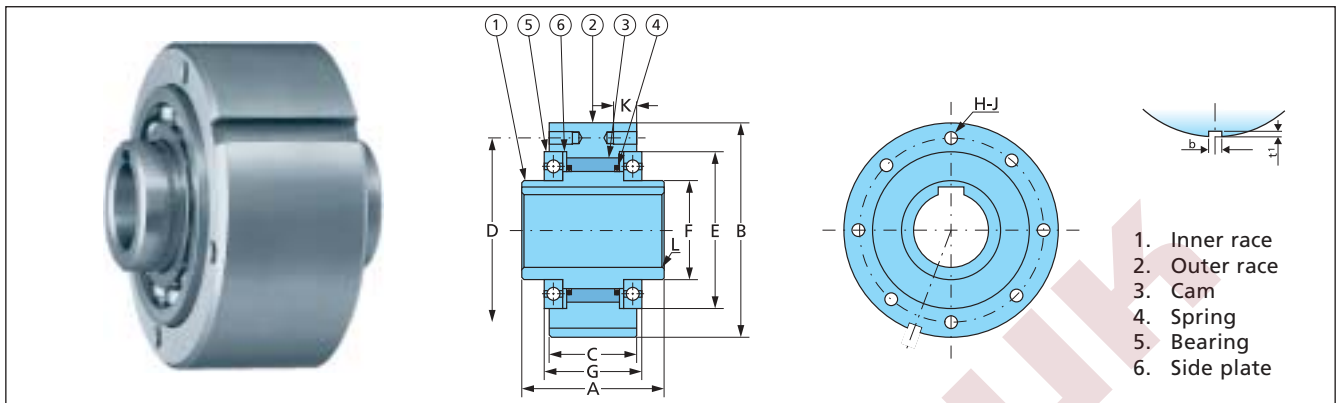

### - introduction of our MZEU-K programm

MZEU-K series Cam Clutches are modular type one way clutches, supplied as a basic type clutch with

standardized optional parts E1, E2, E5 & E7 flanges, E3 torque arm and E4 cover.

## - basic type MZEU-K series Cam Clutches -

Basic type MZEU-K Cam Clutch. Summary of parts and dimensions (referring to table below).

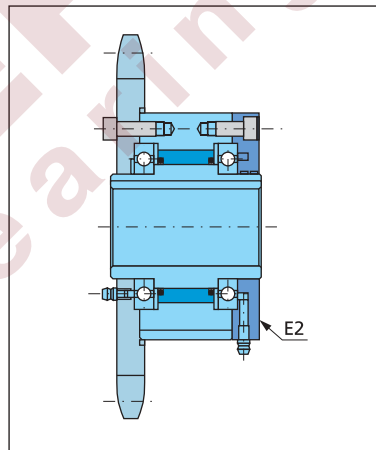

### - dimensions and capacities -

Note: For the dimensions: bore size, B and b we recommend the tolerances H7, h7 and P10 as stated in the table above.

### - installation and usage -

- The sizes MZEU12-K up to MZEU 80-K are supplied pre-greased ex works and do not need any further lubrication except some light maintenance as shown on page 10, to ensure an appropriate function of the lateral roller bearings.
- The ambient temperature range is -40°C up to +40°C. For higher range temperatures please consult Tsubaki.
- The sizes MZEU90-K up to MZEU 150-K require oil lubrication. Refer to lubrication and maintenance on page 10.
- We recommend a shaft tolerance of h7 with a standard key. Our keyways are standardized according to DIN 6885.1
- We recommend applying tolerance H7 or H8 to re-work sprockets, pulley, gears or other parts to be fitted. Before installation of the clutch, it's recommended to clean both ends of the outer race and contact surface of the flange(s), torque arm, cover or fitted part.
- For the sizes MZEU90-K up to MZEU150-K, apply

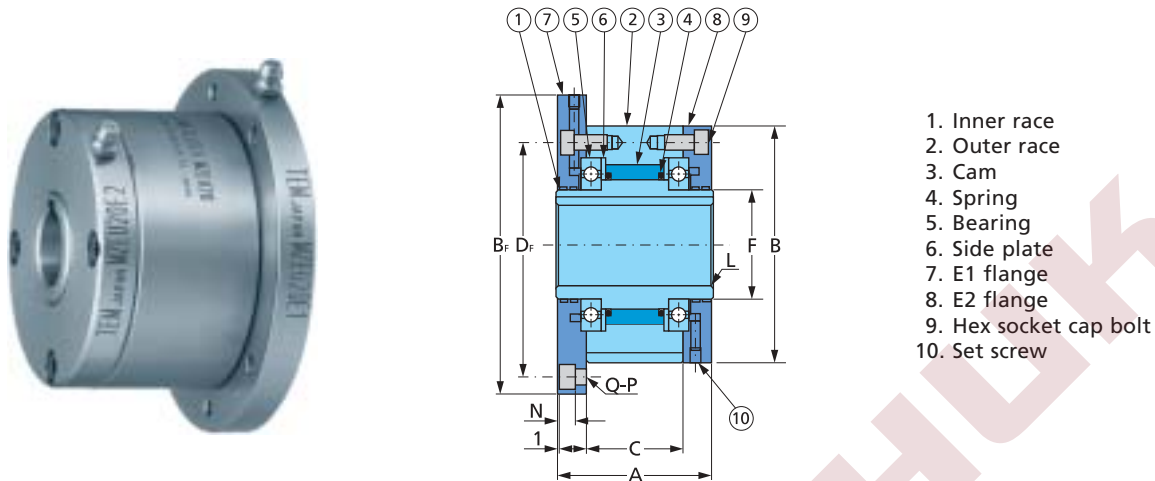

Installation example 1.

seal adhesive (supplied with each optional part) to prevent oil leakage.

- Before assembly of the optional or fitted part(s) check the rotation direction of the clutch, indicated by an arrow on the inner race side surface. When installing sprocket, gear, pulley or other items to the clutch, always use bolts to assemble them.
- Size and quantity are mentioned under H-J in the above mentioned table.
- By installing any type of optional or fitted part in the opposite way the clutch's direction of rotation can be changed.
- Fix a grease nipple to each optional or fitted part.
- When mounting the clutch onto the shaft, apply pressure to the inner race, but **never** to the outer race.
- For high speed indexing applications (over 50 c/min) strong springs are recommendable and can be supplied accordingly.
- Refer to page 10 for other usage indicators and further advise.

## - Cam Clutches series MZEU-K with E1 and E2 flange -

Note: For the dimensions: bore size, B and b we recommend the tolerances H7, h7 and P10 as stated in the table above.

### - installation and usage -

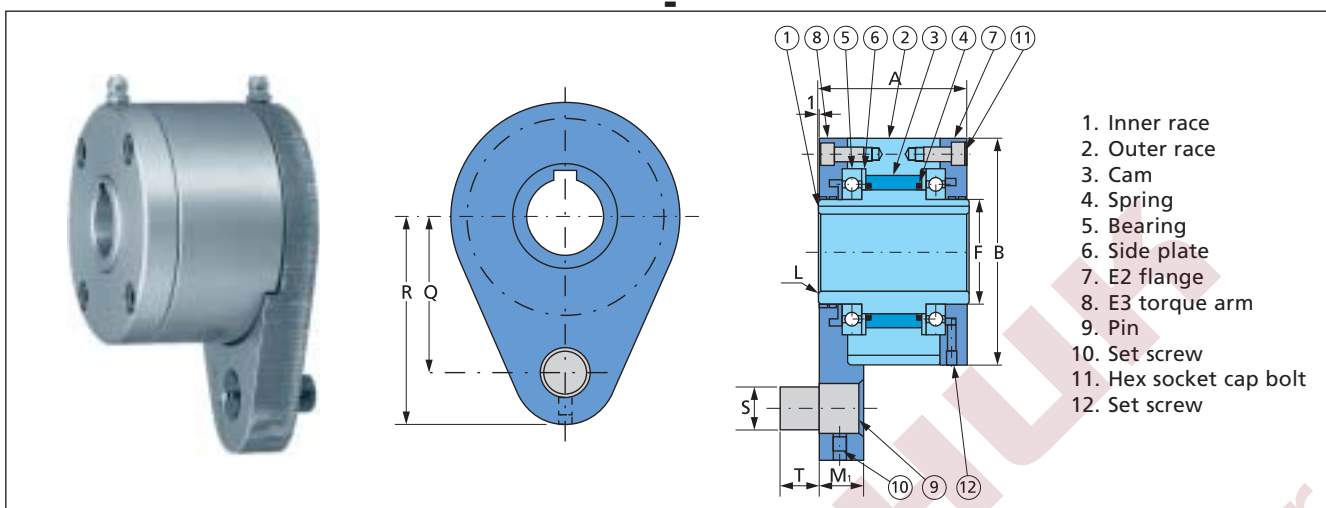

1. The Cam Clutch is delivered as a combination of a basic type clutch, an E1-flange and an E2 flange, each one packed and supplied as an individual part set.  
Each flange set comes with a complete flange kit, containing a number of bolts, a grease nipple, a locker set screw and a seal plug.
2. Check the direction of rotation before assembling, then mount both flanges making use of the flange kits.
3. Before mounting the sizes MZEU90 - MZEU150 apply the sealing adhesive, which comes along with the part sets, between body (outer race surface) and the

Installation example 2.

- optional part, to prevent leakage of oil during operation.
4. When installing sprocket, gear, pulley or other items to the clutch, always use bolts to assemble them. Size and quantity are mentioned under H-J, page 2. Lengths and shape are determined by the thickness of the fitted part.
5. When installing any type of optional or fitted part in the opposite way the direction of the clutch's rotation can be changed.
6. For high speed indexing applications (over 50 c/min) strong springs are recommended and can be supplied accordingly.
7. Refer to page 10 for other usage indicators and further advice.

Note: For the dimensions: bore size and B we recommend the tolerances H7 and h7 as stated in the table above.

### - installation and usage -

1. This version of the MZEU-K Cam Clutch comes as a combination of a basic type clutch, an E3 torque arm and an E4 cover, each one packed and supplied as an individual part set.

Each part set is delivered with a flange kit consisting of bolts, grease nipple, locker set screw and seal plug. The E3 kit comes with a an extra pin and set screw. See drawing and table above no. 9 & 10.

2. Check the direction of rotation before assembling, then mount both flanges making use of the flange kit.

3. Before mounting the sizes MZEU90 - MZEU150 apply the sealing adhesive, included with the part sets, between body (outer race surface) and the

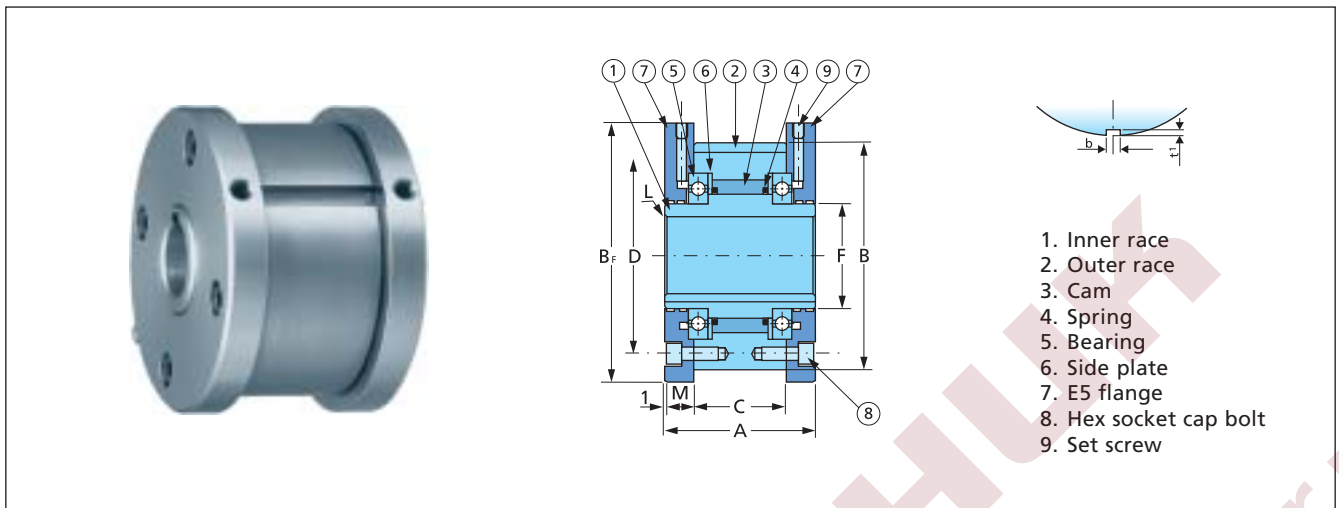

Installation example 4.

optional part, to prevent leakage of oil during operation.

4. For the sizes MZEU12-K up to MZEU80-K assemble the shaft end plate onto the shaft before closing with the E4 cover. Refer to installation example 4.
5. Before mounting the E4 cover on Model MZEU90 up to MZEU150, packing should be fitted between the end surface of the inner race and the surface of the end plate, using sealing, washer and bolt(s). Refer to installation example 4.
6. When installing the optional parts in the opposite way the direction of the clutch's rotation can be changed.
7. Refer to page 10 for other usage indicators and further advise.

## - Cam Clutches series MZEU-K with E5 flanges on both sides -

Basic type MZEU-K Cam Clutch provided with E5 flanges on both sides. Summary of parts and dimensions (referring to table below).

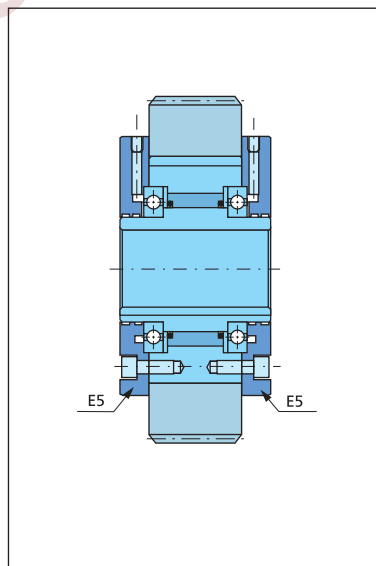

### - dimensions and capacities -

Note: For the dimensions: bore size, B and b we recommend the tolerances H7, h7 and P10 as stated in the table above.

### - installation and usage -

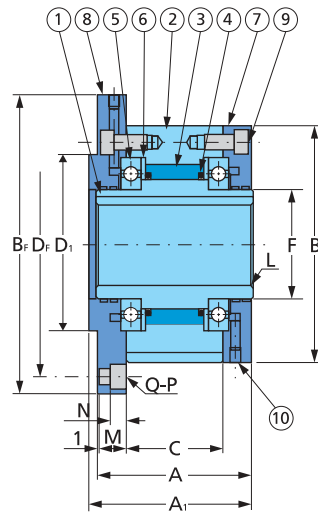

1. This version of the MZEU-K Cam Clutch comes as a combination of a basic type clutch, and two E5 flanges, each one packed and supplied as an individual part set. Each part set comes with a complete flange kit, containing a number of bolts, a grease nipple, a locker set screw and a seal plug.
2. Check the direction of rotation before assembling, then mount both flanges making use of the flange kit.
3. Before mounting the sizes MZEU90- MZEU150 apply the sealing adhesive, which comes along with the part sets, between body (outer race surface) and the

Installation example 5.

- optional part, to prevent leakage of oil during operation.
4. Insert the Cam Clutch into the appropriate unit (gear, sprocket, pulley etc.). We recommend a tolerance of H7 for the bore size. Fix the key and close the unit with the second E5 flange, making use of the flange kit.
5. MZEU-K clutches with E5 and E5 flanges can be used in both rotation directions.
6. For high speed indexing applications (over 50 c/min) strong springs are recommended and can be supplied accordingly.
7. Refer to page 10 for other usage indicators and further advise.

Note: For the dimensions: bore size, B and D<sub>1</sub> we recommend the tolerances H7 and h7 as stated in the table above.

### - installation and usage -

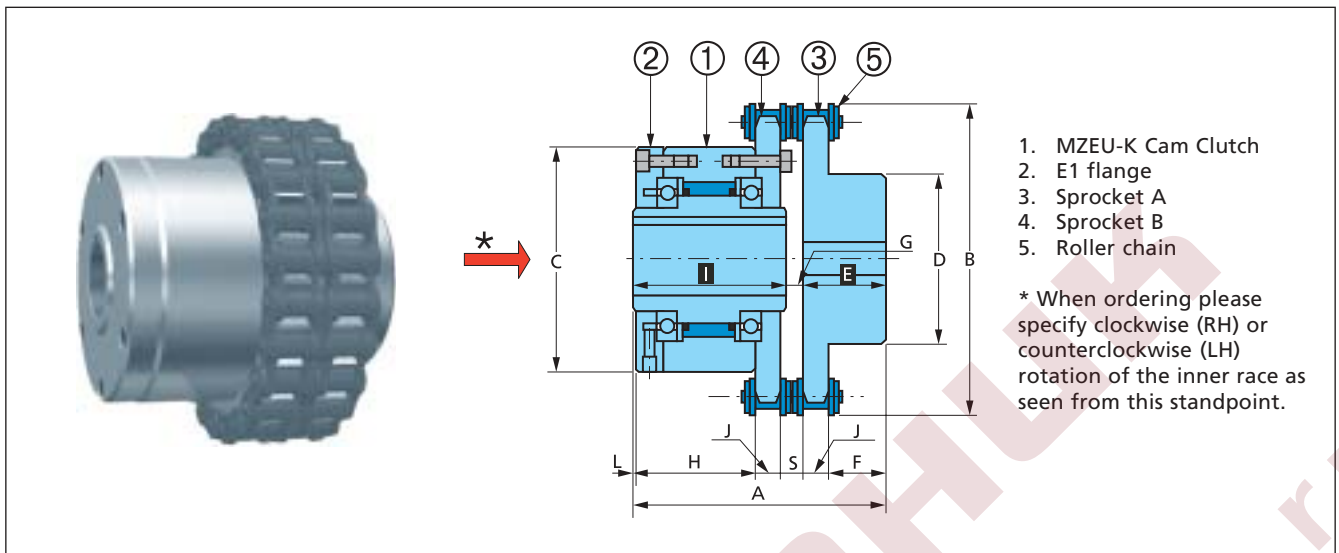

1. This version of the MZEU-K Cam Clutch comes as a combination of a basic type clutch, an E7 and an E2 flange, each one packed and supplied as an individual part set.
2. Each flange set come with a complete mounting kit, containing a number of bolts, a grease nipple, a locker set screw and a seal plug.
3. Check the direction of rotation before assembling, then mount both flanges making use of the flange kit.
4. Before mounting the sizes MZEU90- MZEU150 apply the sealing adhesive, which comes along with the part sets, between body (outer race surface) and the optional part, to prevent leakage of oil during operation.

Installation example 6.

5. Always use bolts for installing a sprocket, a gear, pulley or other options to the clutch. Size and quantity of the bolts needed are mentioned under H-J on page 3. Length and shape of the bolts is determined by the thickness of the fitted part.
6. When installing any type of optional or fitted part in the opposite way the direction of the clutch's rotation can be changed.
7. For high speed indexing applications (over 50 c/min) strong springs are recommended and can be supplied accordingly.
8. Refer to page 10 for other usage indicators and further advise.

Note: For the dimensions: stock bore size and C we recommend the tolerances H7 and h7 as stated in the table above.

MZEU-K-C series Cam Clutch couplings are combinations of standard MZEU-K Cam Clutches and CR type chain couplings.

### - installation and usage -

1. Mount the Cam Clutch part loosely onto the high-speed shaft.
2. Accurately align both sprockets by checking with a straight edge on the teeth of both sprockets.
3. Check whether the clearance (S) between both sprockets is correct, then wrap the chain around the sprockets and close it properly with the connecting link.
4. Ensure that the closed side of the spring clip is situated in the same direction as the rotation of the outer race.

## - lubrication and maintenance -

The basic models MZEU12K to MZEU80K are pre-greased and require no further lubrication. However, the lateral bearings need to be greased periodically. See the tables below for the recommended grease and frequency.

The operational temperature range is -40°C to +40°C.

For higher range temperatures please consult Tsubaki.

The basic models MZEU90 to MZEU150 and optional parts such as flanges, torque arm or cover need to be lubricated with oil at scheduled maintenance. See the tables below for the recommended oil and frequency.

### Recommended grease for Cam Clutches MZEU12K to MZEU80K

Oil company	Ambient temperature	
	- 5° C ~ + 40° C	- 40° C ~ + 40° C
Esso Mobil Shell BP Total	Beacon 2 Mobilux Grease No. 2 Alvaria Grease No. 2 Energrease LS2 Multis 2	Beacon 325 Mobil temp SHC 100 Alvaria Grease RA Energrease LT2 Aerogrease 22

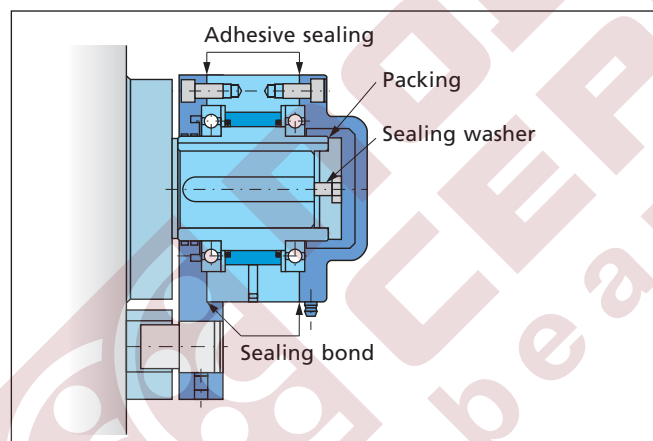

Note: Do not use grease containing EP additives when selecting any other brand or make.

### Recommended oil for Cam Clutches MZEU90 to MZEU150

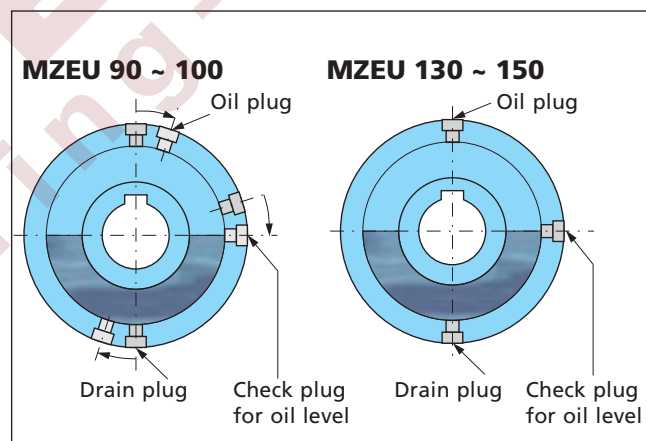

Oil company	Ambient temperature	
	- 10° C ~ + 30° C	+ 30° C ~ + 50° C
Esso Mobil Shell  BP Gulf	Telesso 32, Essolub D-3 10W, ATF Devon ATF 220, Delvac 1310, DTE Oil light Dexron II, Rimula CT Oil 10W Shell Clavus Oil 17, Rotella S Oil 10W BP Energol THB32 Harmony 32, Veritas SD10	Essolub D-3 30 Delvac 1330 Rimulla CT oil 20W/20, 30 Rotella S Oil 20W/20, 30 - Veritas SD30

Note: Do not use oil containing EP additives when selecting any other brand or make.

### - instructions for lubrication of MZEU90 to MZEU150 -

1. Apply a suitable amount of oil before use.
2. As a general rule, the amount of lubricant should be level with the center of the shaft for overrunning or backstopping.
3. The E2 flange has three plugs. The E4 cover has a large plug for adding oil and two small plugs for checking and draining.

4. Place the plugs, so that one is at the top and one is at the bottom. The center one should be level with the center of the shaft.
5. Pour oil into the clutch until it overflows from check plug. After a few minutes, pour in more oil and check that it overflows again.

### - maintenance -

Model	Lubricant	Maintenance
MZEU 12 ~ MZEU 80	Grease	Every 3 months by the grease nipple on the flange, the torque arm and/or cover.
MZEU 90 ~ MZEU 150	Oil	Replace the oil 10 hours after the first installation. Then refresh the oil every 3 months. For dirty environments we recommend refreshment every month.

## - applications -

Tsubaki Emerson Cam Clutches can be used in numerous applications. At the last page of this booklet you will find a general view of the various series of Cam Clutches Tsubaki Emerson can provide from

stock. And if not at hand in the warehouses, your specific Cam Clutch can be made according to your specifications.

11

## - warning -

**Use with care to prevent injury**

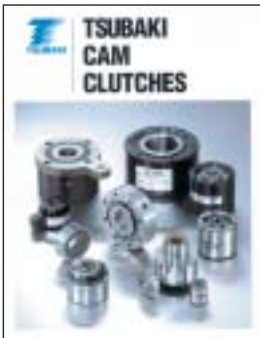

**Comply with the following to avoid serious personal injury**

1. Guards must be provided on all power transmission and conveyor applications in accordance with provisions of ANSI/ASME B 15.1 1992 and ANSI/ASME B 20.1 1993 or other applicable standards. When revisions of these standards are published, the updated edition shall apply.
2. Always lock out power switch before installing, removing, lubricating or servicing a system that uses Cam Clutch products.
3. If the Cam Clutch is used for repeated starting and stopping, make sure the strength of the supports for the Cam Clutch are sufficient.
4. The capacity of your Cam Clutch may be effected by the accuracy of its set up, the amount of pressure exerted on it, wear on other parts in your system, or wear life of the Cam Clutch itself. Check the Cam Clutch at regular intervals and observe any necessary safety precautions.
5. When connecting or disconnecting Cam Clutch products, eye protection is required. Wear safety glasses, protective clothing, gloves and safety shoes.

## - more Cam Clutches from Tsubaki Emerson -

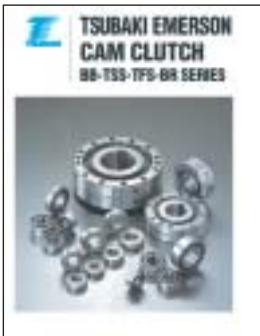

Tsubaki Emerson developed many series of Cam Clutches to meet any industrial demand. Except for the series mentioned in this brochure you may need additional technical solutions to comply with your specific application. The bro-

chures shown below may give you an impression of the vast range of Cam Clutches we can deliver from stock and on customer specifications. Please do not hesitate to contact us for advice or further information.

Tsubaki Emerson Cam Clutches are precision devices which lock the inner and outer races through the wedging action of cams to transmit torque in one direction of rotation and over-run in the opposite direction.

These units are often referred to as freewheels, sprag, overrunning, backstop, or one-way clutches, depending upon their application. In this brochure you will find the complete range of Cam Clutches according to Japanese and American standards.

BB (build-in bearing) series Cam Clutches are available with and without keyways on inner race and/or outer race. Moreover the 2GD versions have special lip seals for effective protection against dust.

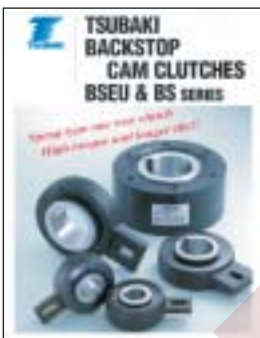

TSS series are non-bearing supported Cam Clutches and as BB series, dimensionally identical to

6200 series ball bearings, having keyway on the inner race as standard.

TFS series are similar to TSS, however their dimensions are the same as 6300 series bearings.

Both TSS and TFS series do require regular maintenance and lubrication as well as lateral bearing support.

BR series Cam Clutches are designed for backstop and overrunning applications with high speeds, having lift off designed cams ensuring a longer lifetime than any other type of clutch.

These series of Cam Clutches from Tsubaki Emerson are one-way clutches with the safest rotation prevention qualities available. They are manufactured for installations with low speed shaft rotations of inclined con-

veyors such as bucket and pivot elevators. Compared to other one-way clutches (ratchet or roller ramp clutch) similar in size, overheating during times when the motor is idling is significantly lower. This helps to maintain superb lubrication qualities thereby improving the wear life of the clutch. Extended fatigue life is also obtainable due to the clutch's large torque capacity.

Cams of BREU series Cam Clutches are designed for a lift-off function, which results in a contactless overrunning stage between inner and outer races. This is due to the centrifugal force of the cam's shape in com-

bination with a special cam cage and a minimum speed applied. They are used for backstop and overrunning applications at higher speeds than conventional clutches can absorb. The clutch's features and design ensure a maintenance free operation and considerable extended lifespan in comparison to any other type of clutch available in the market.
